Philadelphia, PA | jsolly.com | john@jsolly.com | linkedin.com/in/jsolly

EDUCATION

Master of Science in Geoinformation **2015 – 2017**

George Mason University | GPA 3.93

Bachelor of Arts in Geoinformation **2013 – 2015**

University of California, Santa Barbara | GPA 3.85

PROFESSIONAL EXPERIENCE

Chief Technology Officer | Enterprise Health

10/25 – Present

Leidos | Remote

- Define technical vision and engineering strategy for Enterprise Health solutions serving federal agencies including SSA, HHS, CMS, and NIH. Contributed to $40M in OCG in 2025.
- Lead digital modernization initiatives spanning AI/ML, cloud architecture, data engineering, interoperability, and cybersecurity across a portfolio of six accounts with over $2B in annual revenue.

Software Engineer

03/25 – 09/25 | 6-month appointment

Social Security Administration | Baltimore, MD (On-site) | Special Government Employee

- Architected an AI-driven unified service request platform integrating IBM TRIRIGA, ServiceNow, and internal ticketing systems, handling hundreds of tickets per day and accessible to over 60K SSA employees and contractors.
- Supported Digital SSN, Death Master File modernization, and EDEN 2.0 SSN verification API initiatives, reducing query runtimes from seconds to milliseconds.

Backend Engineer

07/24 – 03/25 | 8 months

Guidewire Software | Remote

Departure: Left to serve on the DOGE engineering team at SSA.

- Built and scaled an AWS-hosted, Kubernetes-based SaaS API microservice processing millions of home insurance risk calculations for insurers across the US and Canada.
- Maintained terabyte-scale ETL pipelines ingesting CSV, GeoPackage, and shapefile data into object, NoSQL, and relational storage.
- Developed a fire suppression scoring algorithm in Ruby using TDD and owned the location service microservice, providing geocoding and reverse geocoding services across dozens of microservices.

Senior Software Engineer

09/23 – 07/24 | 10 months

New Light Technologies | Remote

Departure: Pursued an opportunity to engineer higher-scale commercial systems.

- Tech lead for a Terraform-managed serverless Vue.js application with AWS Cognito supporting low-carbon development initiatives in Vietnam. The application informed major state investment decisions in sustainable infrastructure, totaling millions of dollars.

- Developed a serverless US Census Bureau executive analytics application for small-business grant insights using Vue.js and AWS services managed by CloudFormation. Tracked millions of dollars of federal small business funding across the United States.

Senior Software Engineer
09/22 – 09/23 | 1-year contract

University of Maryland | Remote

- Recruited and led a four-person engineering team developing decentralized geospatial infrastructure under a multimillion-dollar grant from the Filecoin Foundation for the Decentralized Web.
- Designed and implemented an ETL pipeline managing 300TB+ of COG and ZARR geospatial data, automating transformations into CAR files for decentralized storage on IPFS and Filecoin, significantly improving data accessibility, security, and cost-efficiency.

Career Break
02/22 – 09/22 | 7 months

- Built independent projects with Terraform, AWS, and Django and sharpened algorithmic problem-solving. Documented projects at jsolly.com/blog.

Integration Consultant
05/21 – 02/22 | 9 months

Yellowfin Business Intelligence (Acquired by Idera) | Remote

Departure: Exited following the Idera acquisition to pursue new opportunities.

- Supported enterprise accounts generating over $1M in annual recurring revenue as technical consultant and Tier 3 escalation engineer.
- Built integrations with REST, SOAP, and JavaScript APIs and led a two-version upgrade for Yellowfin's largest independent software vendor.

Software Product Engineer
05/17 – 05/21 | 4 years

Esri | Redlands, CA (On-site)

- Release manager for SaaS and on-premises version deployments of ArcGIS Dashboards, one of the most used geospatial web applications in the world with billions of interactions.
- Coordinated thirty-two releases across product, QA, and localization processes with no production hotfixes over a four-year tenure.
- Implemented a dockerized automated regression testing harness using Python, Selenium, and Jenkins, cutting manual testing from 240 to 100 hours per quarter (58%).
